Formulae's

Gross sales = units sold * Sale price Net

Sales = Gross sales – discounts Gross

Profits = NetSales – COGS

Profit margin % = Gross profit / Net sales (Denominator value should be over all based on the slicer selection)

Rev% = Netsales / Overall Net sales (Denominator value should be over all based on the slicer selection) Based on YTD /

QTD / MTD selection we should get the values.

Eg: If in the slicer 2014 – May is selected and

YTD is selected then the denominator value should be net sales of 2014 from jan to May.

QTD is selected then the denominator value should be net sales of 2014 only Q2 April and May.

MTD is selected then the denominator value should be net sales of 2014 May Value.
